

## Environmental Impact Assessments

A & F Consulting Engineers can consult with the relevant authorities, complete and deliver sustainable solutions for a large variety of projects that may require Environmental Impact Assessments.

## Bio-diversity Action Plans

A & F have extensive experience working with Internal Drainage Boards, Wildlife Trusts and Universities. We identify and manage key habitats, and flora and fauna populations.

## Habitat Creation Projects

A & F Consulting Engineers have extensively developed several environmental sites in the world. Each project is unique and often incorporates other civil engineering aspects such as coastal, land drainage, desalination, tourism and harbour facilities.

## Brownfield Developments

Contaminated land may be a problem at some sites, we can however sample, research, report and submit acceptable solutions.

## Recycling

Overwhelmed by a sea of waste at the Troisdorf recycling plant

A & F Consulting Engineers are currently working on various recycling projects with companies, giving advice, support and technical information.

We are familiar with Eco-homes and Waste Management projects.

WHAT A DUMP: The huge pile of tyres stored at a disused airfield near Hibblestowe on the South Bank. Picture: DAVE BARKER

## Pollution Consultations

Environmental features may be lost following civil engineering schemes. Designing and implementing schemes can enhance bio-diversity. For that reason, as well as delivering sustainable structures, A & F also advice organisations on all forms of pollution, providing mitigating solutions.
