

Internal Drainage Boards

There are many Internal Drainage Boards in the UK; A & F Consulting Engineers are working for several in the Yorkshire area. We offer expert drainage advice and assistance on capital grant applications.

Main Rivers and Estuaries

Main rivers and estuaries occasionally flood, with devastating consequences. Our expertise covers catchment and topographical analysis, enabling crucial flood alleviation decisions to be made.

Council Authorities

Flooding in North Cave 2007

Our rapid service can help local vulnerable communities.

Flooding in Hessle 2007

Coastal Flood Protection

Storm surge seawater inundation can be a frightening experience. In 1953 the worst of the effects were felt in Britain and Holland. In-house experience includes tidal surge barriers, coastal flood embankments, and emergency planning.

Environmental

Flood protection has to consider the affect on the environment. Projects typically explore best practices, which limit environmental impact and often increase habitats.

Ports

Ports, harbours and docking facilities require flood defences. Our experience includes work on locks, floodgates, bridges, jetties and pumping stations, allowing dock activities to proceed with minimal interruption.

Private Drainage Concerns

Golf clubs, farmers, estates, and other private interests periodically suffer flood inundation. We are able to supply our comprehensive services, from surveying through design and consultation, to site supervision and implementation.

Expert Witness

A & F Consulting Engineers have worked on behalf of private clients and Local Authorities as expert witnesses, in land drainage and flooding issues.
