Land drainage is a vital component of site management. Mostly land drainage benefits farmers, who want to prevent saturated soils drowning crop roots, although other applications are for residential developments, estates, community centres, industry and business. Flood Risk Assessments are an integral component of our methodology.

Typical piled drainage channel

A & F designed channels are planned to manage typical drainage requirements as well as extreme flash flooding events. Solutions are environmentally sensitive enabling all interests to work sustainably together.

Expertise areas are:-

- Internal Drainage Boards
- Farms, Residential Developments and Estates
- Environmental
- Local Authority and Highway Projects
- Private Drainage, Industrial and Business Concerns
- Expert Witness
