

Environmental Impact Assessments

A large variety of projects may require Environmental Impact Assessments (EIA) with Environmental Statements. For these types of projects, A & F consult with the relevant planners, authorities, and deliver. We can also assist with other consultants in the preparation of EIA or comment on other Environmental Statements.

Specialist Environmental Reports

A & F Consulting Engineers have extensive experience working and reporting with Internal Drainage Boards, the Environment Agency, Natural England, Wildlife Trusts and Universities. We identify and manage key European habitats, and flora and fauna populations, adjacent to waste management developments. We can also prepare or organise specialist reports for all circumstances.

Hesse Dock next to River Humber

Site Development

Each site is unique, and may be developed for different uses over time. A & F can assist with all aspects of planning applications to either obtain permissions for waste management activities or move from waste management activities to other development permissions.

Recycling

The recycling of waste materials is essential for modern businesses to operate efficiently. Often A & F combine innovative methods with conventional ideas to achieve the best waste management outcome.

Consultation

Stakeholders have vested interests in waste management activities. It is therefore imperative that with any proposed new development, a comprehensive and exhaustive consultation with stakeholders is completed prior to permissions being granted.

Public Inquiry & Expert Witness

Proposed Incinerator

On occasion disagreements arise concerning controversial developments; this can lead to Planning Appeals and Public Inquiries. A & F are able to assist clients in presenting their concerns in a legal context.
