

Port Asset Surveys

Asset survey services include identifying subsidence, asbestos, corrosion, erosion and other structural defects. All port, navigational and river structures can be included as part of our examination.

Asset survey scope can include:-

- Quays, locks, jetties and working areas.
- Buildings and specialist sheds.
- Roads, railways and bridges.
- Ro-Ro and freight terminals.
- Cranes and bulk handling facilities.

Port Improvements

Following an asset survey it may be necessary to modify, repair or undertake improvements.

A & F Consortia can design, prepare tender documentation, and deliver on any port related structure.

Marinas

Our services also extend to small watercraft docking facilities.

River Structures

Navigational river structures are included in our experience record. Personnel are experienced mariners able to carry out works from boats.

Above and below: Specialist jetties for liquid chemical deliveries and tugboats.
